

ABSTRACT OF THE DISCLOSURE

A communication band control system opens an unused portion of a communication band previously allocated to a certain user, to other users, and accepts use requests of all or a part of the unused portion, from other users. And the communication band control system allocates all or a part of the unused portion which corresponds to use requests, to a different user. In this way, the unused portion of the communication band of a certain user is resold to a different user. As a result, communication band use requests from users can be coped with flexibly. The utilization factor of the communication bands is increased.
